

## **Intellectual Property & Anti-Cloning Guard**

### **I. The Human Veto Over AI**

All creative assets, philosophical frameworks, and narrative structures within the Ancestor Media System (AMS) are the result of human intent, biological memory, and stewardship. We explicitly prohibit the use of these assets—including text, audio personas, and visual seals—for the training of Large Language Models (LLMs) or the development of generative AI cloning technologies without express written consent from the Steward.

### **II. Moral Rights of the Steward**

The "Sanctuary" environment and its proprietary "Stewardship Roadmap" are protected creative works. Misappropriation, unauthorized cloning of the user interface, or the "scraping" of member-contributed ancestral data is a violation of the Sovereign Protocol and a breach of the trust established within this fellowship.

### **III. Integrity of Records**

The Ancestor Media System is dedicated to verified truth. Any attempt to replicate the AMS vetting process for the purpose of generating fraudulent historical records, or using our intellectual property to lend "authority" to unverified claims, will result in immediate revocation of Sanctuary access and formal legal notice.

### **IV. Non-Derivative Usage**

While members are encouraged to export and share their own narratives, the structural framework and branding of the Sanctuary remains the sole property of AMS. You may not create derivative "Sanctuaries" or platforms using the foundational logic provided during your membership.

Verified and Anchored for the Protection of the Fellowship.
